

ABSTRACT

A method for producing a (1-alkenyl)cyclopropane compound represented by the formula (2):

5 wherein R^1 and R^2 are the same or different, and independently represent a hydrogen atom, an optionally substituted alkyl group, an optionally substituted alkenyl group, an optionally substituted alkynyl group, an optionally substituted aryl group or an optionally substituted aralkyl group,
 10 which comprises bringing a (2-formyl-1-alkenyl)cyclopropane compound represented by the formula (1):

wherein R^1 and R^2 are the same as defined above, into
 15 contact with a palladium catalyst.
